

The accessories shown on this page can be used to connect two panels together or finish off the ends, whenever using Hy-Lite aluminum windows as interior panels or partitions. Simply snap off the nail fin (or request that Hy-Lite remove the fin) and snap on the accessory. Each accessory is available for three-inch or two-inch thick block windows.

3" Thick Block

2" Thick Block

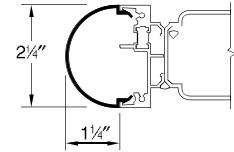

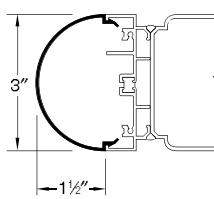

Flat Cap

Flat cap can be used to finish off the end of a panel or partition. For installing partitions and shower walls, mount flat cap to the floor or shower curb and vertically to the wall. Then, snap the panel onto the cap.

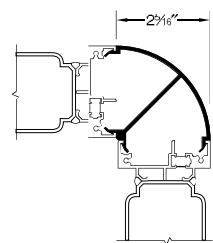

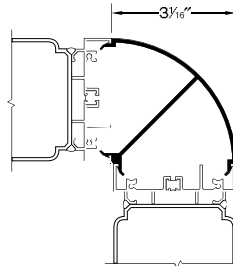

Round Cap

Round cap can be used on the end of a panel or partition for a bullnose finish.

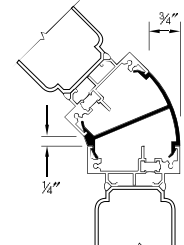

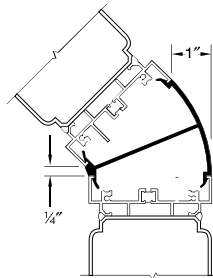

90° Corner Cap

The 90-degree corner cap is used to snap together two panels at a 90-degree angle.

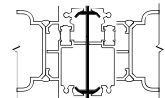

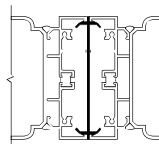

45° Corner Cap

The 45-degree corner cap is used to snap together two panels at a 45-degree angle.

Aluminum Mull

Aluminum Mulls can be used to join two panels together.

ALUMINUM ACCESSORIES

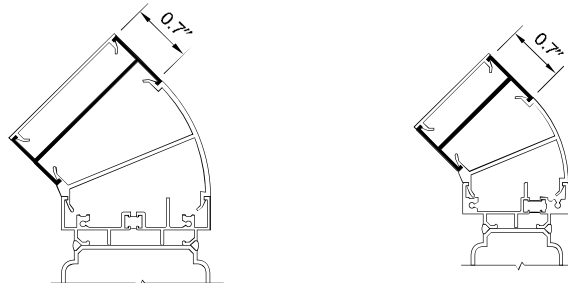

Aluminum

The accessories shown on this page can be used to connect two panels together or finish off the ends, whenever using Hy-Lite aluminum windows as interior panels or partitions. Simply snap off the nail fin (or request that Hy-Lite remove the fin) and snap on the accessory. Each accessory is available for three-inch or two-inch thick block windows.

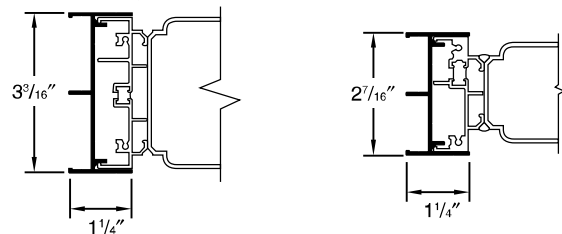

Trim Union

Trim Unions can be used to join two accessory caps together. When creating angled walls, the trim union allows you to create a flat surface at an angle from the end of a panel.

Mounting Channel

Mounting channels are used to install block panels as shower and partition walls. Attach flat cap to the floor or base and attach mounting channel to the wall. The panel slides into the mounting channel and compensates for non-plumb walls. Available in white and clear anodized.

ALUMINUM ACCESSORIES

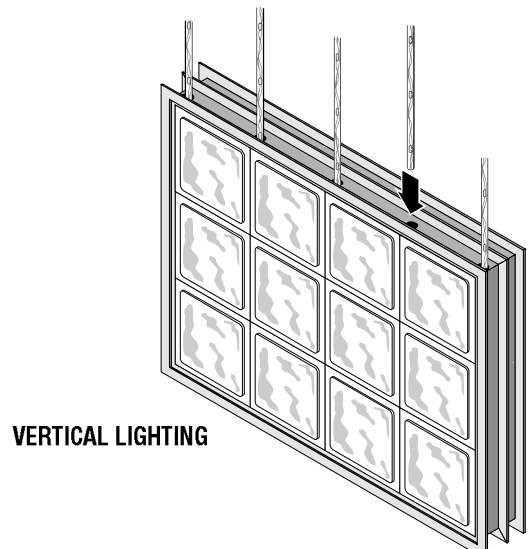

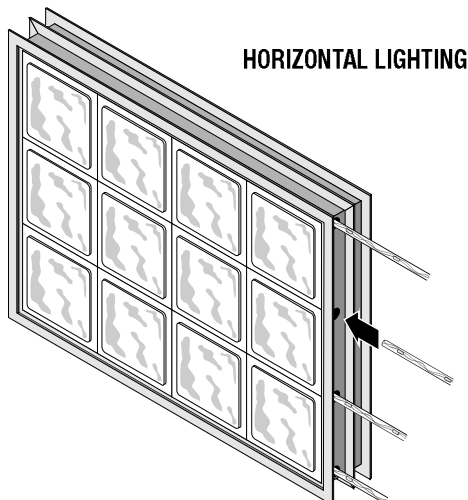

Tube Lighting

Create exciting sparkle to windows and panels by installing long-lasting light tubes from Tube Lighting Products. These subminiature low-voltage tubes make Hy-Lite blocks shimmer, glisten, and glow by refracting on the internal design. The bulbs in these tubes last an average of more than ten years, requiring almost no maintenance!
